#### Directional control proportional valves

#### DSE3 - Directional control hydraulic proportional valves

The DSE3 valve is a directly operated directional control proportional valve, CETOP 03, with ports in compliance with ISO 4401 standards (CETOP RP 121H). It is used for directional and speed control of hydraulic actuators. Valve opening and hence flow rate can be modulated continuously in proportion to the current supplied to the solenoid. The valve can be controlled directly by a current control supply unit or by means of the relative electronic control units to exploit valve performance to the full. Also available with manual lever override.
